

Reading

Required

Watt, intro to Chapter 8 and intros to 8.1, 8.4, 8.6, 8.8.

Recommended

 Paul S. Heckbert. Survey of texture mapping. IEEE Computer Graphics and Applications 6(11): 56--67, November 1986.

Optional

- Watt, the rest of Chapter 8
- Woo, Neider, & Davis, Chapter 9
- James F. Blinn and Martin E. Newell.
 Texture and reflection in computer generated images. Communications of the ACM 19(10): 542--547, October 1976.

Texture mapping

Texture mapping (Woo et al., fig. 9-1)

Texture mapping allows you to take a simple polygon and give it the appearance of something much more complex.

- Due to Ed Catmull, PhD thesis, 1974
- Refined by Blinn & Newell, 1976

Texture mapping ensures that "all the right things" happen as a textured polygon is transformed and rendered.

3

Non-parametric texture mapping

With "non-parametric texture mapping":

- Texture size and orientation are fixed
- They are unrelated to size and orientation of polygon
- Gives cookie-cutter effect

Parametric texture mapping

With "parametric texture mapping," texture size and orientation are tied to the polygon.

Idea:

- Separate "texture space" and "screen space"
- Texture the polygon as before, but in texture space
- Deform (render) the textured polygon into screen space

A texture can modulate just about any parameter - diffuse color, specular color, specular exponent,

Implementing texture mapping

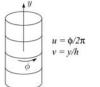

A texture lives in it own abstract image coordinates paramaterized by (u,v) in the range

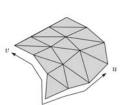

([0..1], [0..1]):

texture coordinate

It can be wrapped around many different surfaces:

Computing (*u,v*) texture coordinates in a ray tracer is fairly straightforward.

Note: if the surface moves/deforms, the texture goes with it

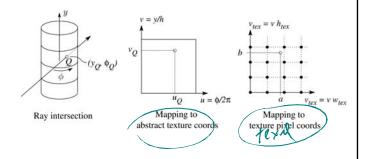

Mapping to texture image coords

The texture is usually stored as an image. Thus, we need to convert from abstract texture coordinate:

$$(u,v)$$
 in the range ([0..1], [0..1])

to texture image coordinates:

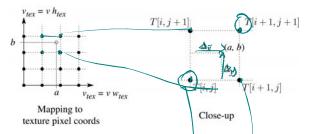

$$(u_{tex}, v_{tex})$$
 in the range ([0.. w_{tex}], [0.. h_{tex}])

Q: What do you do when the texture sample you need lands between texture pixels?

Texture resampling

We need to resample the texture:

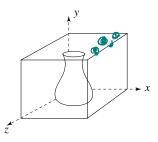

A common choice is **bilinear interpolation**:

$$T(a,b) = T(i+\Delta_x, j+\Delta_y)$$

$$= \frac{(1-\Delta x)(1-\Delta y)}{(1-\Delta y)} (\Pi i, j) + \frac{\Delta x}{(1-\Delta x)} (\Pi i, j+1) + \frac{(1-\Delta x)}{(1-\Delta x)} (\Pi i, j+1) + \frac$$

Solid textures

Q: What kinds of artifacts might you see from using a marble veneer instead of real marble?

One solution is to use solid textures:

- Use model-space coordinates to index into a 3D texture
- Like "carving" the object from the material

One difficulty of solid texturing is coming up with the textures.

Solid textures (cont'd)

Here's an example for a vase cut from a solid marble texture:

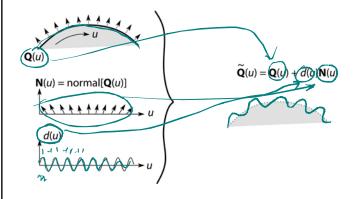

Solid marble texture by Ken Perlin, (Foley, IV-21)

Displacement mapping

Textures can be used for more than just color.

In **displacement mapping**, a texture is used to perturb the surface geometry itself:

 These displacements "animate" with the surface

 $\mathbf{Q} \colon \mathsf{Do}$ you have to do hidden surface calculations on $\mathbf{Q} ?$

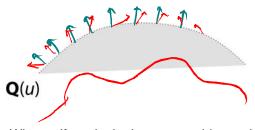

11

Bump mapping

In **bump mapping**, a texture is used to perturb the normal:

- ◆ Use the original, simpler geometry, Q(u), for hidden surfaces
- Use the normal from the displacement map for shading:

 $\tilde{\mathbf{N}} = \text{normal}[\tilde{\mathbf{Q}}(u)]$

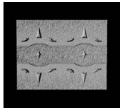

Q: What artifacts in the images would reveal that bump mapping is a fake?

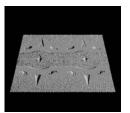

Displacement vs. bump mapping

Input texture

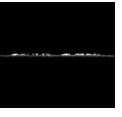

Rendered as displacement map over a rectangular surface

Displacement vs. bump mapping (cont'd)

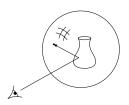

Original rendering

Rendering with bump map wrapped around a cylinder

Bump map and rendering by Wyvern Aldinger

Environment mapping

In **environment mapping** (also known as **reflection mapping**), a texture is used to model an object's environment:

- Rays are bounced off objects into environment
- Color of the environment used to determine color of the illumination
- · Really, a simplified form of ray tracing
- Environment mapping works well when there is just a single object – or in conjunction with ray tracing

Under simplifying assumptions, environment mapping can be implemented in hardware.

With a ray tracer, the concept is easily extended to handle refraction as well as reflection.

15

Combining texture maps

Using texture maps in combination gives even better effects, as *Young Sherlock Holmes*

Construction of the glass knight, (Foley, IV-24)
